## General

The cubicle for outgoing feeders in fixed-mounted design are intended for installation of switch disconnector fuses 3NJ4. The in-line fuse-switch disconnectors make for optimum packing density due to their compact design and their modular structure.

## Structure and Functions

The 1600 mm high switching device compartment can be equipped with in-line fuse-switch disconnectors 3NJ4 in vertical design.

Cable feed from bottom or top *

* Consider cable flange plates!

max. 8 and $14 \times 160 \mathrm{~A}$
max. 4 and $7 \times 250 \mathrm{~A}$
max. 4 and $7 \times 400 \mathrm{~A}$
max. 4 and $7 \times 630 \mathrm{~A}$

## Optional mounting

Apply only for bus connection in opposite direction!
max. $10 \times 160 \mathrm{~A}$ (operation behind door) or
Auxiliary compartments (mounting depth $=285 \mathrm{~mm}$ )
or
rapid assembly kits

## OFFD

Switch disconnector fuses
for outgoing feeders from 160 A to 630 A

## Internal separation/doors

## Installation of Instruments

For current metering the measuring instruments can be installed into the cubicle door. The belonging current transformer is mounted in incoming circuit. For in-line fuse-switch disconnector 160 A , the installation of transformer is possible only with optimal design.

## Vertical Distribution Bus (3-pole)

The in-line fuse switch disconnectors are connected with copper-fish-plates directly to main busbar system.
PE-, PEN- and N -conductor bars are located below or above in the cubicle.

A vertical busbar system is necessary only for the assembly of a second device line (optional).
The cubicle bus system with the phase conductors L1, L2, L3 is located at the rear of the cubicle. This cubicle bus system is connected by cables to the main busbar system.

## Rated current vertical distribution bus (optional)

| Crosssection | Rated current $h_{h}$ as a function of ambient temperature [A] |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | $20^{\circ}$ | $25^{\circ}$ | $30^{\circ}$ | $35^{\circ}$ | $40^{\circ}$ | $45^{\circ}$ | $50^{\circ}$ |
|  | non-ventilated |  |  |  |  |  |  |
| 1×60x10 | 1540 | 1500 | 1470 | 1430 | 1335 | 1360 | 1300 |
|  | ventilated |  |  |  |  |  |  |
| $1 \times 60 \times 10$ | 1680 | 1640 | 1600 | 1560 | 1520 | 1480 | 1430 |

Cross-section at single direction mounting:
PE-cross-section $1 \times 60 \times 10$
PEN-, N-cross-section $2 \times 60 \times 10$
At opposite direction mounting:
Connection directly to the horizontal bars PE, PEN and N

## Cable connection compartment

The cable connection compartment is optionally located below or at top. The cable connection is connected directly to the switching device. The maximal connecting cross-sections are seen in the device catalogues.

## Rated current switch disconnector fuses 3NJ41

| 3NJ41 <br> Type | Rated current [A] | Rated current $I_{n}$ as a function of ambient temperature [A] |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| non-ventilated |  |  |  |  |  |  |  |  |
| 3NJ410 | 160 | 126 | 123 | 120 | 117 | 114 | 110 | 107 |
| 3NJ412 | 250 | 215 | 210 | 205 | 200 | 195 | 189 | 184 |
| 3NJ413 | 400 | 315 | 305 | 300 | 290 | 285 | 275 | 270 |
| 3NJ414 | 630 | 405 | 395 | 390 | 380 | 370 | 360 | 345 |
| ventilated |  |  |  |  |  |  |  |  |
| 3NJ410 | 160 | 146 | 143 | 140 | 136 | 132 | 129 | 125 |
| 3NJ412 | 250 | 237 | 231 | 226 | 220 | 214 | 208 | 202 |
| 3NJ413 | 400 | 365 | 355 | 350 | 340 | 330 | 320 | 310 |
| 3NJ414 | 630 | 495 | 485 | 470 | 460 | 450 | 435 | 420 |

## Space requirement

| Type <br> 3NJ4 | Rated <br> current | Space <br> requirem. <br> [mm] | max. number pro <br> cubicle <br> cubicle width <br> [mm] |  |
| :---: | :---: | :---: | :---: | :---: |
|  | $[\mathrm{A}]$ |  | 600 | 850 |
| 3NJ410 | 160 | 50 | $8(+6)^{*}$ | $14(+10)^{*}$ |
| 3NJ412 | 250 | 100 | 4 | 7 |
| 3NJ413 | 400 | 100 | 4 | 7 |
| 3NJ414 | 630 | 100 | 4 | 7 |

*) When installing optionally an extra line in the cubicle, additional 6 or $10^{*}$ fuse switch disconnectors $3 N J 410$ (160A) can be assembled depending on the cubicle width.
Attention! This applies only for connection in opposite direction
i.e.
main busbars at top and external connection from top
respectively
main busbars below and external connection from bottom

## Projecting rule

Configuration of the in-line fuse switch disconnectors inside the cubicle
Sizes of 3NJ4 disconnectors decreasing either from the left to the right or from the right to the left.

## Admissible utilisation of feeders

The specified rated currents for 3NJ4 are valid for the placement with maximum sized fuse links in 3NJ4 disconnectors. With the use of smaller fuse links the same percental utilisation is admissible.

Example: 3 NJ 414 disconnector in non-ventilated cubicle, mounted with fuse links 500 A , ambient temperature $\leq 40^{\circ} \mathrm{C}$ :
max. admissible continuous load current $=(370 \mathrm{~A} / 630 \mathrm{~A}) \times 500 \mathrm{~A}=290 \mathrm{~A}$

## Options of cubicle assembling

Cable from top
Busbar location
rear, top
(in opposite direction)

busbar location
rear, bottom (single direction)

Cable from bottom
Busbar location
rear, bottom (in opposite direction)

Busbar location
rear, top (single direction)

## Height requirement

| Disconnectors 3NJ4, 160-630 A | $=$ | 700 mm |
| :--- | :--- | :--- |
| Disconnectors 3NJ4, 160 A | $=$ | 500 mm |
| Auxiliary compartments | $=$ | 350 mm |
| Rapid assembly kits | $=$ | 600 mm |
